SUMMARY

Senior Backend Engineer with 4+ years of experience in scalable, PCI-compliant fintech systems and production AI integrations. Expert in Java/Spring Boot microservices and multi-stage LLM workflows. Proven track record of delivering mission-critical applications at a US-listed company.

EXPERIENCE

Senior Software Engineer

Feb 2022 – Present

Paymentus Corporation – Mohali, India

- Engineered an AI-driven automation system that generates Java-based billing jobs from business mapping files using a phase-based workflow (parsing → template generation → execution → validation) with real-time monitoring, eliminating manual development and reducing development-to-deployment time from 5 weeks to 1 week.
- Created multiple AI agents and workflow skills adopted organization-wide. A notable "Design Doc" skill allows developers to elaborate tasks in Cursor chat; the skill autonomously researches the problem statement and generates Markdown design documents based on established Knowledge Base templates.
- Developed a complementary Confluence integration skill utilizing an MCP server to automatically convert Markdown artifacts into Confluence tags and publish generated design documents directly to the corporate Knowledge Base.
- Designed and developed scalable backend microservices using Java and Spring Boot for Paymentus's EBPP platform, supporting millions of transactions daily in a high-concurrency, PCI-compliant environment.
- Built and optimized secure payment workflows and RESTful APIs, reducing integration time-to-market and ensuring 100% regulatory compliance across core payment modules.
- Led environment stability and release reliability across SIT, UAT, and Production by designing CI/CD pipelines using Jenkins and Bitbucket, ensuring zero-downtime deployments.
- Improved system observability and resolved critical production incidents by creating custom Prometheus dashboards and monitoring alerts, reducing MTTR and enhancing platform reliability.

Tech Stack: Java, Spring Boot, Microservices, Node.js, MongoDB, Docker, Kubernetes, Terraform, Helm, AWS, Jenkins, Prometheus

PROJECTS

Heyy Brew (AI-Powered Platform) — www.heybrew.com

React 19, Node.js, TypeScript, Gemini/OpenAI, Capacitor, Tailwind CSS

- An AI-driven platform for coffee enthusiasts offering intelligent recipe generation and bean analysis via a cross-platform mobile and web application.
- Architected using React, Capacitor, and a scalable Node.js backend featuring a robust multi-LLM fallback mechanism (Gemini/OpenAI) to ensure 99.9% uptime.

AI-Powered "Steps to Reproduce" (STR) Generator

Python, Claude 4.5 (Vertex AI), GPT-4

- An internal automation system that converts raw server logs into structured, Jira-ready bug reports, reducing engineering debugging time by ~40%.
- Implemented multi-stage LLM workflows in Python with strict data security layers, utilizing regex and NER filtering for PII sanitization prior to external AI processing.

MailFlow AI (AI-Powered Outreach Engine) — <https://cold-email-engine-frontend.vercel.app>

React, TypeScript, Flask, PostgreSQL, Gemini AI, SMTP Orchestration

- A high-performance outreach platform featuring AI-driven lead research, dynamic content generation, and real-time transparent engagement tracking.
- Engineered a decoupled architecture with a React frontend and a Python backend, utilizing SMTP connection pooling, priority queuing, and custom 1x1 pixel logging.

SKILLS

- Languages:** Java, Python, JavaScript, Node.js, SQL, Bash
- Backend:** Spring Boot, Microservices, Distributed Systems, REST APIs, Spring Security, Hibernate, Express.js
- Cloud & DevOps:** Kubernetes, Docker, Terraform, Helm, AWS, CI/CD, Argo CD
- Databases:** Oracle, MySQL, MongoDB, Snowflake
- Monitoring:** Prometheus, StatsD, Git, Bitbucket, Jira
- AI/LLM:** Prompt Engineering, RAG, MCP Servers, Multi-stage LLM Workflows, Production AI Integration

EDUCATION

Bachelor of Technology (B.Tech), Computer Science Engineering

Jaypee University of Information Technology

08/2019 - 05/2022 | CGPA: 8.4/10
